

# **COMPARATIVE CLIMATIC DATA**

The Comparative Climatic Data publication is also available through NCDC's World Wide Web page. Users can access the tables electronically or order a printed copy for a reduced fee from the NCDC web site at www.ncdc.noaa.gov. Under "Data & Products" heading click on "FREE DATA" and then on "Comparative Climatic Data". HTML and ASCII text data files are available for downloading at the above address.

For further information concerning climatic data on diskettes and for price quotations, please write or phone: The National Climatic Data Center, Room 120,151 Patton Avenue, Asheville, NC 28801-5001. Telephone: (828) 271-4800, 271-4010 TDD, 271-4876 FAX

### COMPARATIVE CLIMATIC DATA

These tables of meteorological elements outline the climatic conditions at major weather observing stations in all 50 states, Puerto Rico, and Pacific Islands. The data are from active or former sites comparable in exposure. Stations with less than three years of data are omitted. Data in this publication are from the Normals Means and Extremes table contained in the LOCAL CLIMATOLOGICAL DATA ANNUAL SUMMARY, published for individual stations.

Stations are listed alphabetically by state. The tables are arranged so that values of the same element can be compared for different locations by use of a single table. Some weather stations do not regularly report some elements and will, therefore, not be listed in the table for that element. Asterisks (\*) denote average frequency of occurrence greater than zero, but smaller than one half.

- I. Observed Data (Monthly and Annual) These values are the means and extremes for the Period of Record (number of years observed).
  - A. Temperature Highest of Record, Degrees Fahrenheit (F)
  - B. Temperature Lowest of Record, Degrees Fahrenheit (F)

The annual temperature entry for each station represents the highest or lowest observed temperature in any month.

C. Mean Number of Days with Minimum Temperature 32 Degrees F or less.

The mean number of days with a minimum temperature of 32 degrees F or lower indicates the frequency of occurrence of days with freezing temperatures.

- D. Mean number of Days with Maximum Temperature 90 Degrees F or More (70 Degrees F or More for Alaska Stations)
- E. Mean number of Days with Precipitation 0.01 Inches or More

This table shows mean number of days per month with at least 0.01 inch of liquid or water equivelent of frozen precipitation. This is the smallest amount of precipitation numerically recorded.

F. Snowfall (including ICE PELLETS and SLEET) - Average Total in Inches.

NOTE: Beginning in April 1988 HAIL is also included under Snowfall. Therefore, some stations may show snowfall during the warm months.

G. Wind - Average Speed (MPH)

H. Wind - Maximum Speed (MPH)

This table expresses both a maximum wind speed for the stations and, where available, the direction (referenced to true North) from which it blew. Short gusts are listed only for stations denoted with a (G).

If the direction is expressed as one of the 16 compass points (N, NNE, NE, etc.) the maximum speed is calculated from the minimum time during which one mile of wind passed the station. Note that some stations that report short gusts (G) may also use the 16 compass point reference for wind direction.

If the direction is expressed numerically, the maximum speed is the highest one minute average value recorded by the observer. Direction is given in tens of degrees clockwise from true North.

I. Sunshine - Percentage of Possible

The total time that sunshine reaches the surface of the earth is expressed as the percentage of the maximum amount possible from sunrise to sunset with clear sky conditions.

### J. Cloudiness - Mean Number of Days - Clear (CL), Partly Cloudy (PC), Cloudy (CD)

This table shows the mean number of days per category of cloudiness. The categories are determined for daylight hours only. Clear denotes zero to 3/10 average sky cover. Partly cloudy denotes 4/10 to 7/10 average sky cover. Cloudy denotes 8/10 to 10/10 average sky cover. Beginning with July 1996 sky coverage is reported to eights (oktas). Clear indicates 0 - 2 oktas, partly cloudy indicates 3 - 6 oktas and cloudy indicates 7 - 8 oktas.

### K. Average Relative Humidity (percent) - Morning (M) and Afternoon (A)

The relative humidity is expressed as a percentage measure of the amount of moisture in the air compared to the maximum amount of moisture the air can hold at the same temperature and pressure. Average humidity values are given for morning and afternoon observations. Maximum relative humidity usually occurs during morning hours. In this publication, the Local Standard Time (LST) of morning and afternoon humidities are shown below.

Atlantic, Alaska	(M morning 8 A.M.) (A afternoon 2 P.M.)
Eastern, Bering, 165W Meridian	(M morning 7 A.M.) (A afternoon 1 P.M.)
Central, 180E Meridian	(M morning 6 A.M.) (A afternoon NOON)
Mountain, 165E Meridian	(M morning 5 A.M.) (A afternoon 5 P.M.)
Pacific, 150E Meridian	(M morning 4 A.M.) (A afternoon 4 P.M.)
135E Meridian	(M morning 9 A.M.) (A afternoon 3 P.M.)

- II. Climatological Normals (Monthly and Annual) these are the 30-year average values computed from the data recorded during the period 1961-1990. Normals are updated decennially. If an instruments exposure was changed, mathematical adjustments are made to make the data representative of the current location. The values are statistically determined and cannot be recreated solely from the original record.
  - A. Normal Daily Maximum Temperature, Degrees F
  - B. Normal Daily Minimum Temperature, Degrees F.
  - C. Normal Daily Mean (Average) Temperature, Degrees F.
  - D. Normal Heating Degree Days (July-June)
  - E. Normal Cooling Degree Days (January-December)

Degree day data are used to estimate amounts of energy required to maintain comfortable indoor temperature levels. Daily values are computed from each days mean temperature (max + min/2). Each degree that a day's mean temperature is below or above 65 degrees Fahrenheit is counted as one heating or cooling degree day.

F. Normal Precipitation, Inches

The normal precipitation is the arithmetic mean for each month over the 30-year period including liquid water equivalent of frozen precipitation.

Other types of weather and climate data may be obtained from the National Climatic Data Center, Room 120, 151 Patton Avenue, Asheville, NC 28801-5001. Telephone (704) 271-4800, 271-4010 TDD, 271-4876-FAX.

# **TEMPERATURE CONVERSIONS**

F C		
212   100		WATER BOILS
194  90		Temperatures in this publication are given in degrees Fahrenheit(F). The CELSIUS or
176  80		CENTIGRADE (C) scale is used in many parts of the world. Temperature conversion
158   70		methods are shown below.  The standard formula to convert Fahrenheit to Celsius is
140   60		C equals (F minus 32) multiplied by 5/9
122   50		For example to convert 68 degrees Fahrenheit to Celsius 68 – 32 equals 36 and 36 multiplied by 5/9 equals 20
104   40		so 68 degrees Fahrenheit equals 20 degrees Celsius conversely to convert Celsius to Fahrenheit
86   30		F equals (c times 9/5) plus 32
68   20		For example to convert 20 degrees Celsius back to Fahrenheit 20 multiplied by 9/5 equals 36
50   10		36 plus 32 equals 68
32   0	$\leftarrow$	WATER FREEZES (AT STANDARD SEA LEVEL PRESSURE)
14  10		Since -4 yields -40 in either conversion, an alternate set of formulas are
-4  20		F equals $9/5 / (C + 40) - 40$ and C equals $5/9 \times (F + 40) - 40$
-22  30		
-40  40	$\leftarrow$	TEMPERATURE SCALES COINCIDE
-58  50		
-76  60	)	
-94  70	)	
-112 80	)	
-130  90	)
